

# WesternBright transfer membranes for immunoblotting

## Convenient Nitrocellulose and PVDF membranes for Western blotting

Advansta offers a large selection of nitrocellulose and polyvinylidene difluoride (PVDF) transfer membranes for immunoblotting applications. Choose from convenient pre-cut membranes sized for protein minigels and economical membrane rolls. All membranes are optimized for compatibility with a wide range of protein stains and enzyme-based detection systems, specifically with chemiluminescent substrates.

The WesternBright PVDF membranes provide durability and high tensile strength for ease of handling. Advansta offers PVDF membranes appropriate for chemiluminescent detection and low-autofluorescence PVDF membranes perfect for fluorescent detection.

The WesternBright nitrocellulose membranes are pure nitrocellulose media that has high binding capacity for proteins. These nitrocellulose membranes are stronger and more durable than other nitrocellulose membranes, and will not rip, tear, or crack during transfers. The nature of this material yields sharper images with little or no distortion.

### Advantages
